

Mosquito-Borne Disease

Funded through USDA APHIS Cooperative Agreement

IS YOUR HORSE PROTECTED?

Mosquitoes across Massachusetts and in surrounding states spread Eastern Equine Encephalitis (EEE) and West Nile Virus (WNV).

In 2019, eight horses in Massachusetts died from EEE. In 2020, interventions including vaccination eliminated cases of EEE in horses!

Vaccination can prevent EEE and WNV in horses. Protect your horses!

Call your veterinarian to schedule this life-saving vaccination.

MA residents: Can't afford this vaccine? Ask your vet if MDAR can help.

[Eastern Equine Encephalitis \(EEE\) and West Nile Virus \(WNV\)](#) are spread by mosquitos and can cause fatal neurologic disease in horses, other animals, and people. Routine vaccination can prevent these diseases in horses.

Cannot afford this life-saving vaccine? MDAR is partnering with local veterinarians to offer discounted EEE vaccination for equine owners with financial need. Ask your veterinarian for more information.
